

GALaxy IV
RESOURCE
and diagnostic guide to
FIGURING OUT
just what is going on
WITH YOUR
ELEVATOR

**NOW AVAILABLE IN SMARTER MACHINE ROOMS
VIA SECURE, BUILT-IN WI-FI LINK**

Troubleshooting questions on-site can be tough. What makes it worse is the fact that there's rarely just one place you can go to get the answers. This means delay; higher maintenance cost, not to mention installation downtime. But that's no longer a problem with **GALaxy IV — the Controller that features a secure, built-in Wi-Fi link.**

GALaxy IV is loaded with all you need to diagnose a problem including **GALileo**, our intuitive diagnostic interface. With it you can play back trace screens, identify input/output faults, and perform traffic analyses right **inside the Machine Room**. And on its server you'll find system schematics, connection diagrams, and be able to archive MCPs (*built with the Helios Smart App*). Everything is accessible via Wi-Fi connection via smartphone or tablet — **no Internet connection is required.**

Our system is password protected, secure from remote access. Also, **GALaxy IV** is non-proprietary, offering real maintenance flexibility, which saves plenty over time.

By making it easier to access what you need to troubleshoot questions, **GALaxy IV** makes you far more productive. Interested? Then let us tell you more. All you need to do the job right, and even more, is waiting at your fingertips inside of this Controller.
